

OpenCTI Platform Activity Report

Report Date: October 21, 2025
Platform: OpenCTI Threat Intelligence Platform
Section: Data Ingestion - Monitoring Dashboard

Executive Summary

This report provides an overview of the OpenCTI platform's data ingestion and monitoring activities. The platform is actively processing threat intelligence data through multiple configured connectors, demonstrating operational capability for automated threat intelligence collection and processing.

System Status Overview

Platform Metrics (Real-time)

Metric	Value	Status
Connected Workers	3	 Active
Queued Bundles	5,520	Processing
Bundles Processed	0.8/s	Normal
Read Operations	-147.8/s	Active
Write Operations	-12.4/s	Active
Total Documents	0	Initializing

Registered Connectors

The platform has **6 registered connectors** configured for automated threat intelligence ingestion:

1. Abuse SSL

- **Type:** External Import
- **Automatic Trigger:** NOT APPLIED
- **Messages Processed:** 0
- **Status:**  ACTIVE
- **Last Modified:** Oct 21, 2025, 12:02:XX
- **Manager Deployment:** FALSE

Purpose: Monitors and imports SSL certificate abuse indicators

2. CISA Known Exploited Vulnerabilities

- **Type:** External Import
- **Automatic Trigger:** NOT APPLIED
- **Messages Processed:** 5,600
- **Status:**  ACTIVE
- **Last Modified:** Oct 21, 2025, 12:03:XX
- **Manager Deployment:** FALSE

Purpose: Imports known exploited vulnerabilities from CISA's KEV catalog

Activity: High message volume indicates active processing of vulnerability data

3. ExportFileCsv

- **Type:** Internal Export
- **Automatic Trigger:** NOT APPLIED
- **Messages Processed:** 0
- **Status:**  ACTIVE
- **Last Modified:** Oct 21, 2025, 12:03:XX
- **Manager Deployment:** FALSE

Purpose: Enables CSV export functionality for threat intelligence data

4. ExportFileStix2

- **Type:** Internal Export
- **Automatic Trigger:** NOT APPLIED
- **Messages Processed:** 0
- **Status:**  ACTIVE
- **Last Modified:** Oct 21, 2025, 12:03:XX
- **Manager Deployment:** FALSE

Purpose: Enables STIX 2.x format export for threat intelligence sharing

5. ExportFileTxt

- **Type:** Internal Export
- **Automatic Trigger:** NOT APPLIED
- **Messages Processed:** 0
- **Status:**  INACTIVE
- **Last Modified:** Oct 21, 2025, 12:03:XX
- **Manager Deployment:** FALSE

Purpose: Enables plain text export functionality

Note: Currently inactive - may require configuration or activation

6. ImportDocument

- **Type:** Internal Import
- **Automatic Trigger:**  AUTOMATIC
- **Messages Processed:** 0
- **Status:**  ACTIVE
- **Last Modified:** Oct 21, 2025, 12:03:XX
- **Manager Deployment:** FALSE

Purpose: Automatically imports threat intelligence from uploaded documents

Key Observations

Operational Status

-  **3 Workers Connected:** Platform has adequate processing resources
-  **Multiple Active Connectors:** Diverse threat intelligence sources configured
-  **High Queue Volume:** 5,520 bundles queued indicates initial data ingestion phase

Data Processing

- The CISA Known Exploited Vulnerabilities connector is actively processing data (5.6K messages)
- Platform is processing approximately 0.8 bundles per second
- Read/Write operations are active, indicating database activity

Configuration Notes

- Most connectors do not have automatic triggers enabled (manual/on-demand operation)
 - Manager deployment is disabled for all connectors (local operation mode)
 - One export connector (ExportFileTxt) is currently inactive
-

Recommendations

1. **Monitor Queue Processing:** The high number of queued bundles (5.5K) should be monitored to ensure timely processing
2. **Consider Automatic Triggers:** Evaluate enabling automatic triggers for critical threat intelligence sources

3. **Activate Inactive Connectors:** Review the ExportFileTxt connector to determine if it should be activated
 4. **Scale Workers if Needed:** If queue processing becomes slow, consider adding additional workers
 5. **Document Processing Volume:** Track the CISA KEV connector's high message volume to understand data ingestion patterns
-

Conclusion

The OpenCTI platform is operational and successfully configured with multiple threat intelligence connectors. The system is actively ingesting data from external sources (particularly CISA vulnerability data) and has export capabilities configured. The platform demonstrates functional capability for automated threat intelligence collection and management.
